

Laser Shot offers a variety of courseware packages for installation on all Real Combat™ Marksmanship Training Systems. Each courseware package offers an assortment of exercises, each with adjustable settings to provide progressive skill building exercises to match the skill level of each shooter.

VBS2 -

TACTICAL WEAPONS SIMULATOR

- Accurately-modeled environmental and ballistic effects allow training in dynamic scenarios
- Verified accurate ballistic model using approved G tables for small arms
- Real world GIS data incorporated to create geo-typical and geo-specific terrains

RUNNINGMAN®

- Prepares shooters to engage moving targets in a wide variety of conditions
- Simulates moving targets at varying speeds and distances
- Built-in after-action review for a detailed review of each shot fired
- Includes Laser Shots patented Lead Indicator technology

COURSE OF FIRE

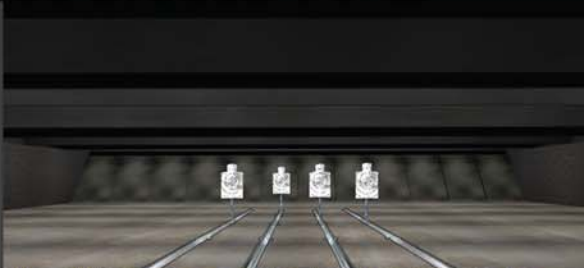

- Create virtually any qualification course from three to fifty meters while accommodating up to four targets in a single lane
- Lighting conditions can be set by stage from fully lit to complete darkness
- AAR enables a review of every shot taken from each distance - examine shot grouping, placement, and print the targets

BASIC RIFLE MARKSMANSHIP

- Takes the shooter through the four fundamentals of marksmanship
- Includes a 25yd rifle zeroing target
- Improves knowledge of weapon functionality

SKILL DRILLS 1 & 2

- Training drills focus on the improvement of a student's speed, accuracy, and decision making skills
- Each drill may be tailored to individual skill levels from beginner to expert using adjustable settings such as number of targets, target face time, and target speed

KNOWN DISTANCE RANGE

- Built in editor for creating new courses and changing existing ones
- Accurate ballistics & weather conditions-day & night fire
- Records training sessions for each shooter
